Valves to suit the taste of the food industry

Never have consumer preferences been more diverse: alongside familiar foods, people are increasingly enjoying vegan and sustainably produced options. Allergies and intolerances also have to be taken into account. To meet this breadth of expectations, the food industry needs flexible, intelligent processes.

As manufacturers develop new recipes and expand or optimise their processing lines, valves must be adapted to even more complex operating conditions. They need to handle rapid process changes, challenging ingredients, varying particle sizes and fibres, as well as a growing emphasis on saving water, energy and chemicals in the name of sustainability. Added to this are stringent hygiene requirements and tightening regulations. The food industry must therefore rise to the challenges of automation, flexibility and sustainability.

Valves for flexible and automated processes

Fortunately, the valve industry has just the right ingredients. Intelligent valve control systems help optimise production by providing real-time data to improve efficiency, reduce downtime, and support the transition from manual to automated processes. This blend of flexibility and automation enables food manufacturers to keep pace with increasing production complexity while achieving their sustainability targets. And that, of course, is something plant operators can truly savour.

Discover the latest trends and highlights from the valve industry at VALVE WORLD EXPO from 1 to 3 December 2026 in Düsseldorf. Find the latest industry news and product information at www.valveworldexpo.de.
